Katherm Modular System

Katherm Modular System:
The time-saver on site.

The 'Dream Team'

In future combine Katherm trench heating with the new Katherm modules. A wide number of modules enables you to configure the system to suit conditions on site.

The time-saver

Katherm trench heating can also be joined without previous site measurements to form an individual, made-to-measure solution, thanks to the Katherm Modular System. That way, you can benefit from shorter lead times and faster completion of your project on site.

On-site adjustment

You can adapt the Katherm modules on site with a few simple adjustments, compensating for construction tolerances during installation.

Design reliably

Design simply and reliably with the short lead times for our standard trenches combined with the new Katherm modules. You can also rely on our help with project solutions to find the respective solution.

Time-saving in terms of project planning and installation

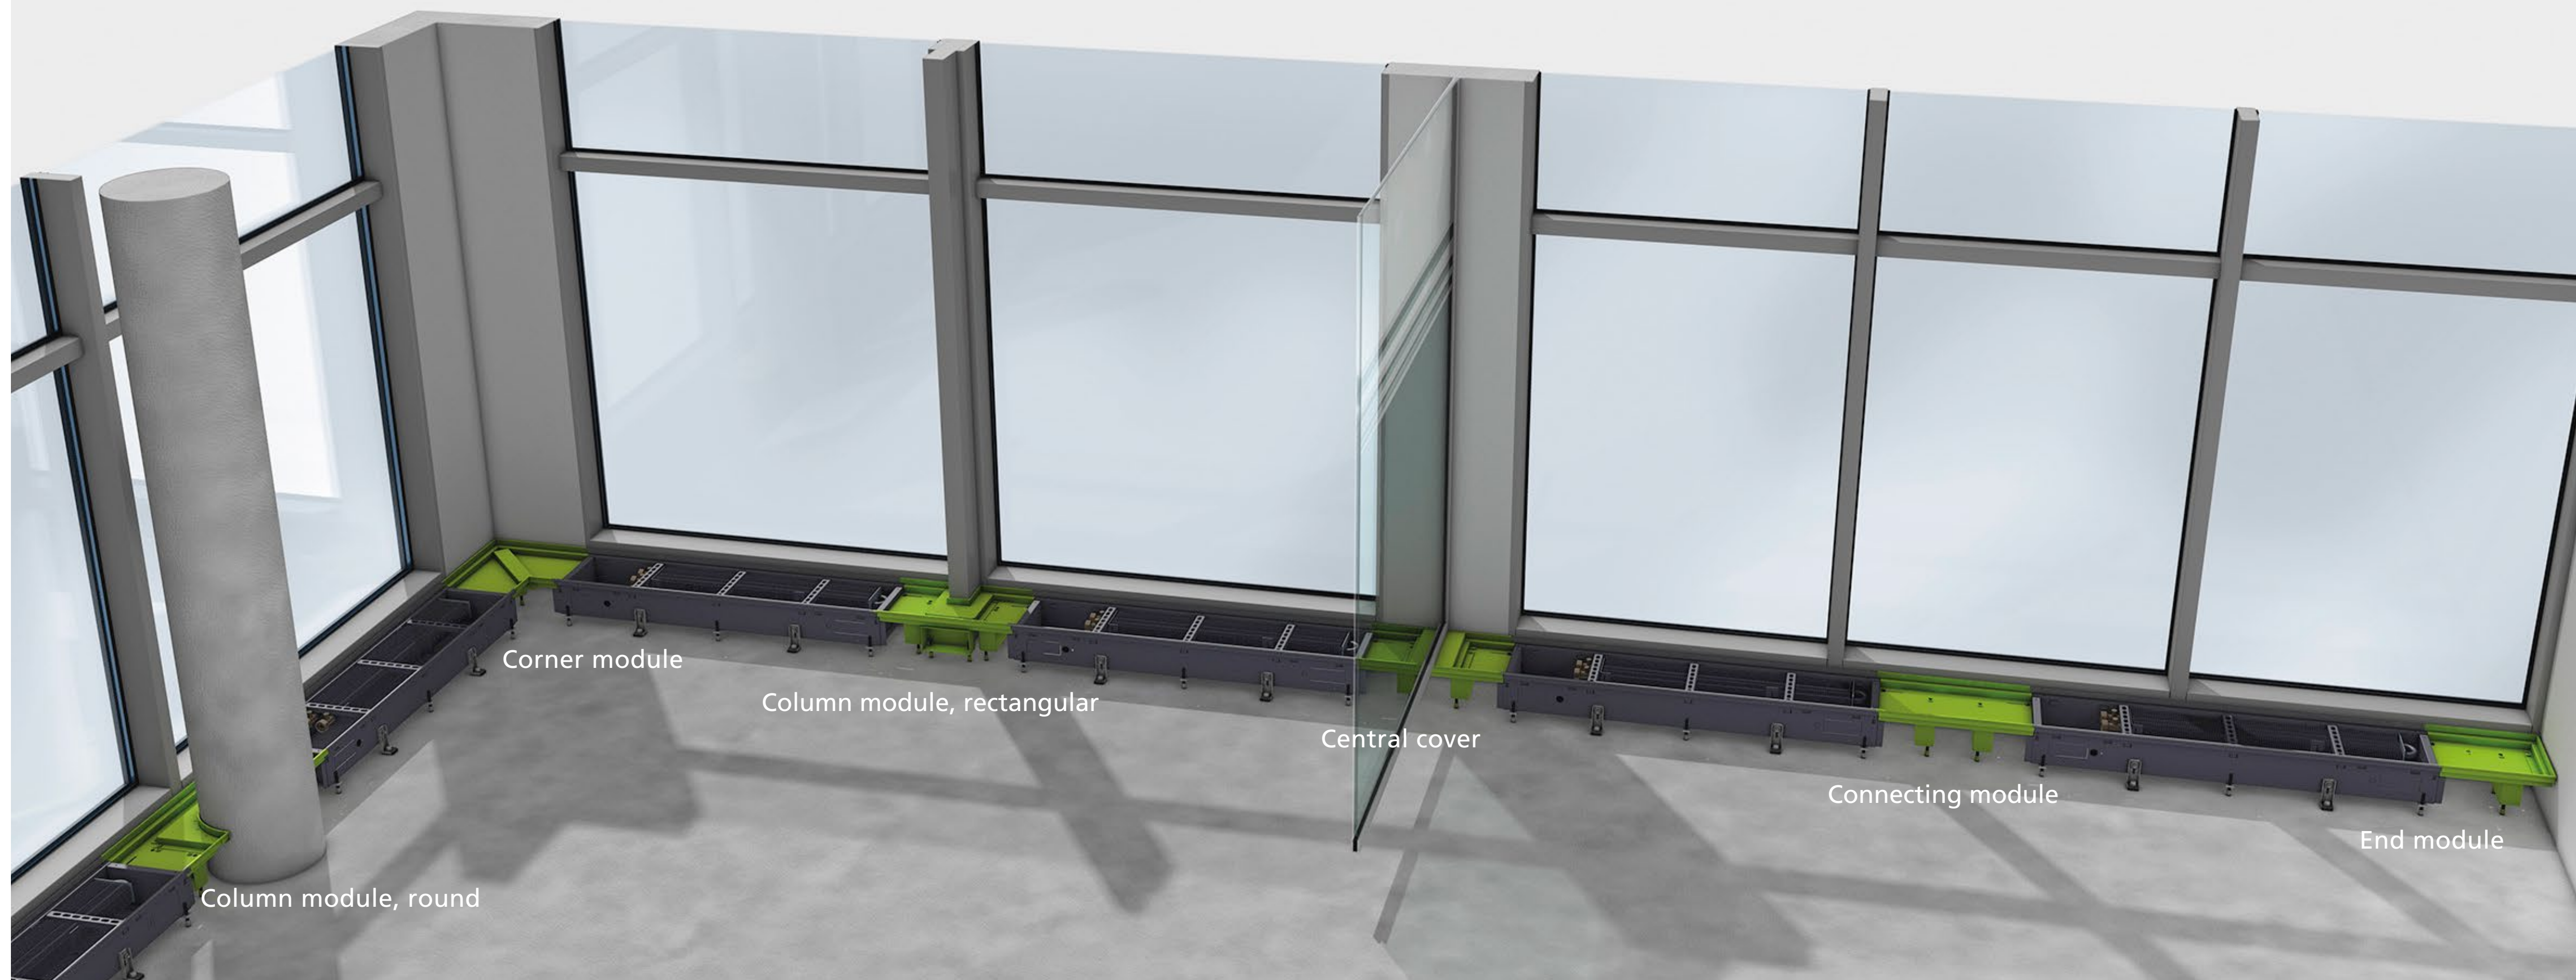

With the new Katherm Modular System from Kampmann you can now save on site measurements, even with the most challenging construction layout.

The benefits for you:

- ▶ Faster project completion,
- ▶ a made-to-measure solution and
- ▶ a satisfied customer!

Katherm modular system at a glance

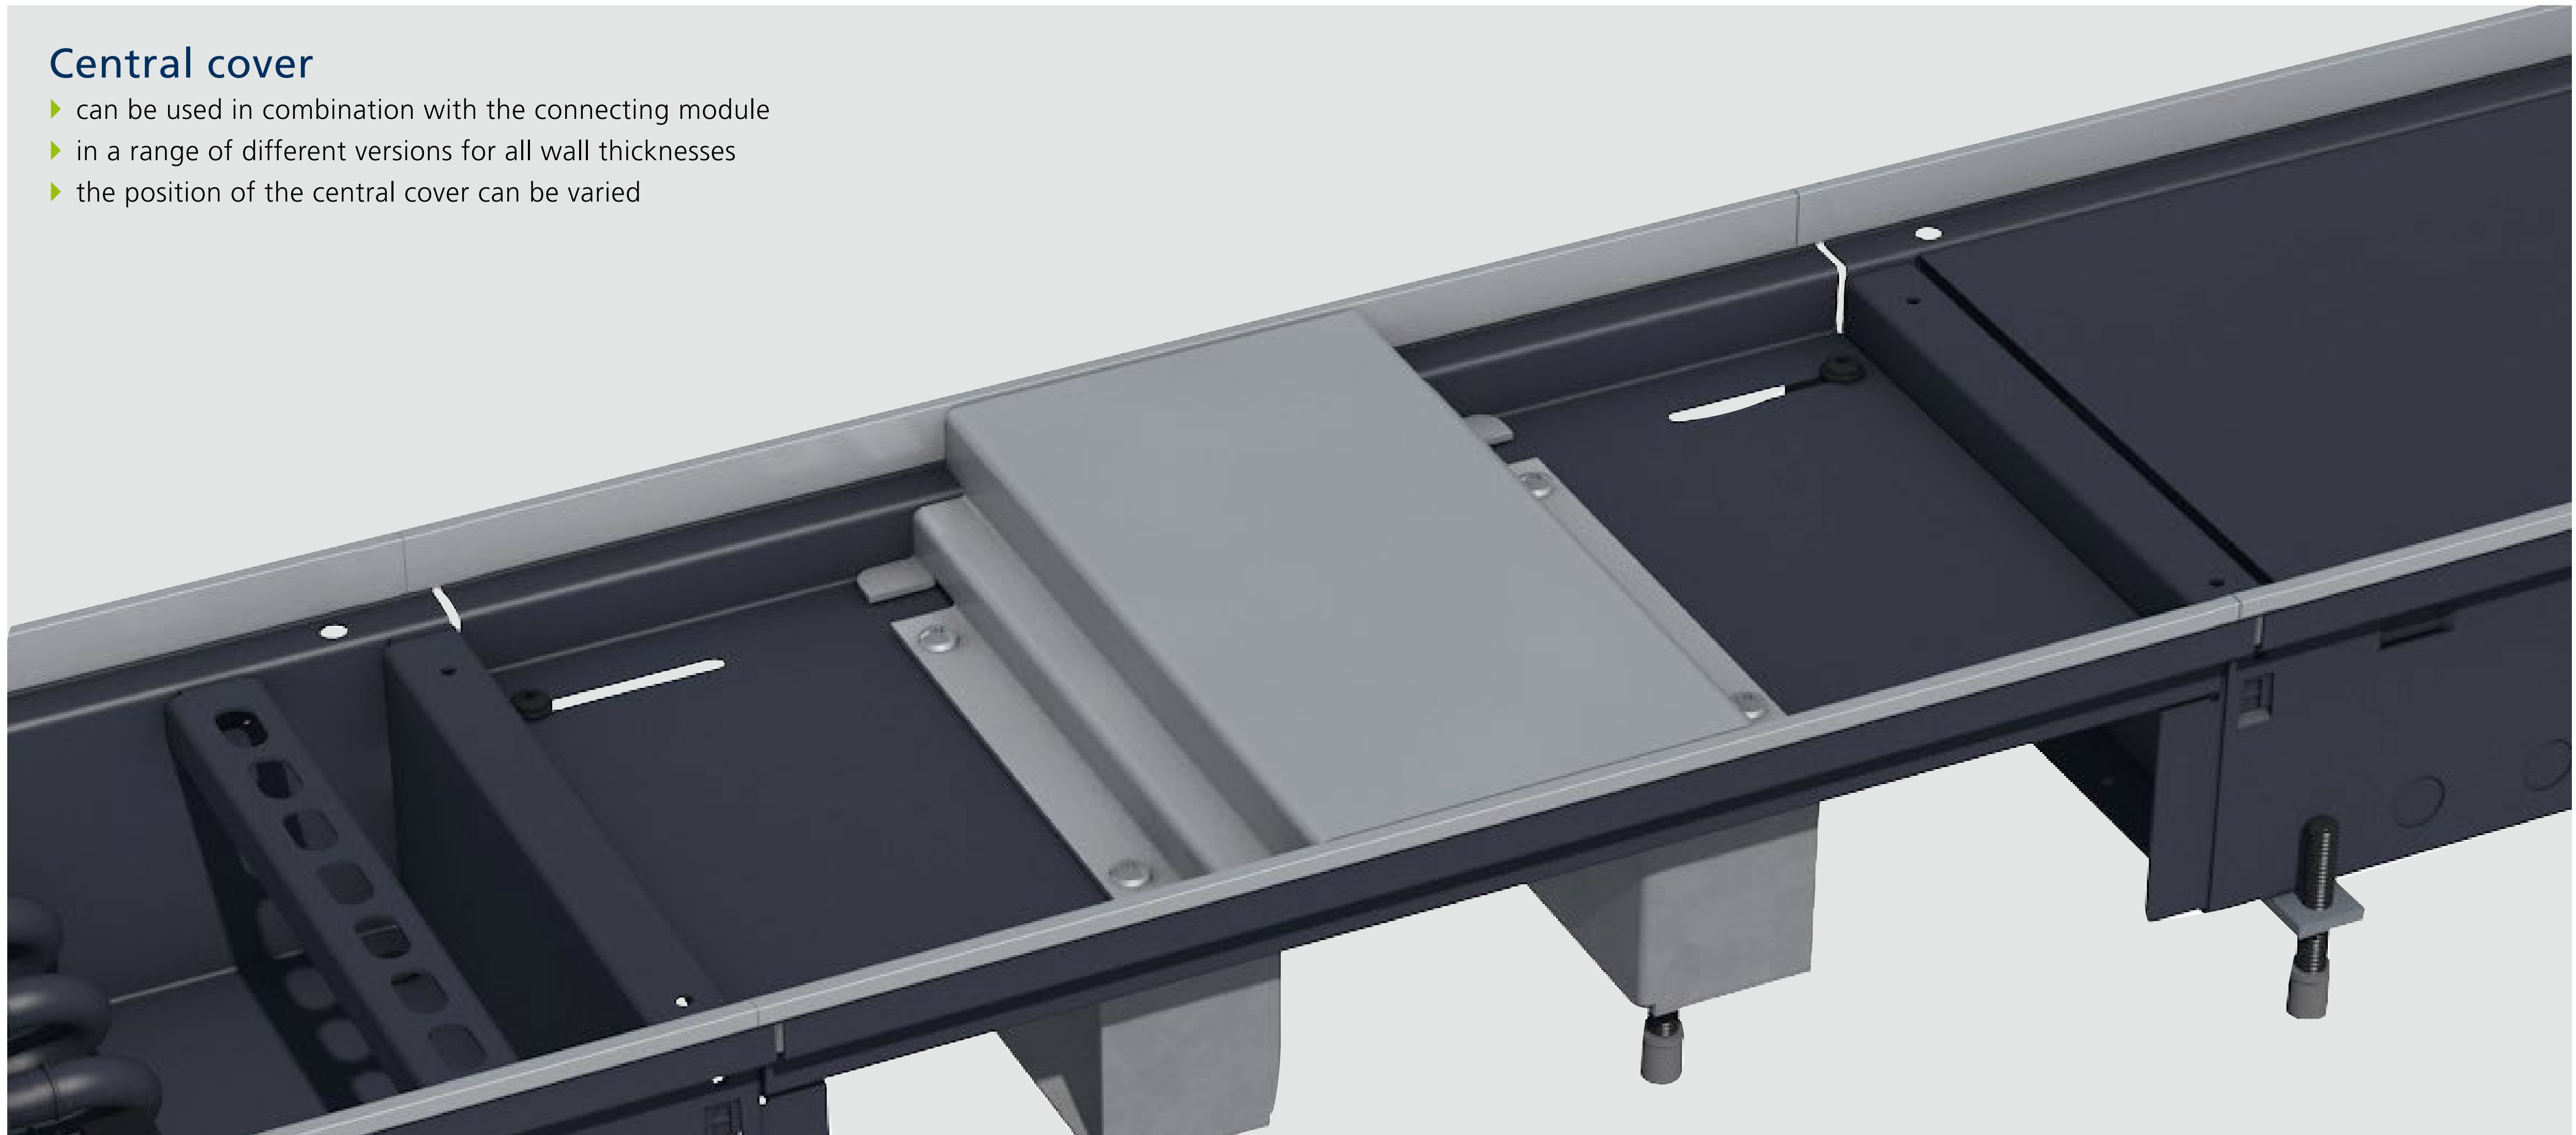

Connecting module

- ▶ available in various lengths
- ▶ can be shortened on site by up to 100 mm to adapt to the building structure

Central cover

- ▶ can be used in combination with the connecting module
- ▶ in a range of different versions for all wall thicknesses
- ▶ the position of the central cover can be varied

End module

- ▶ for on-site adjustment with a sliding end section,
- ▶ possible angle adjustment by up to 5° for optimum fit against the wall

Column module, rectangular

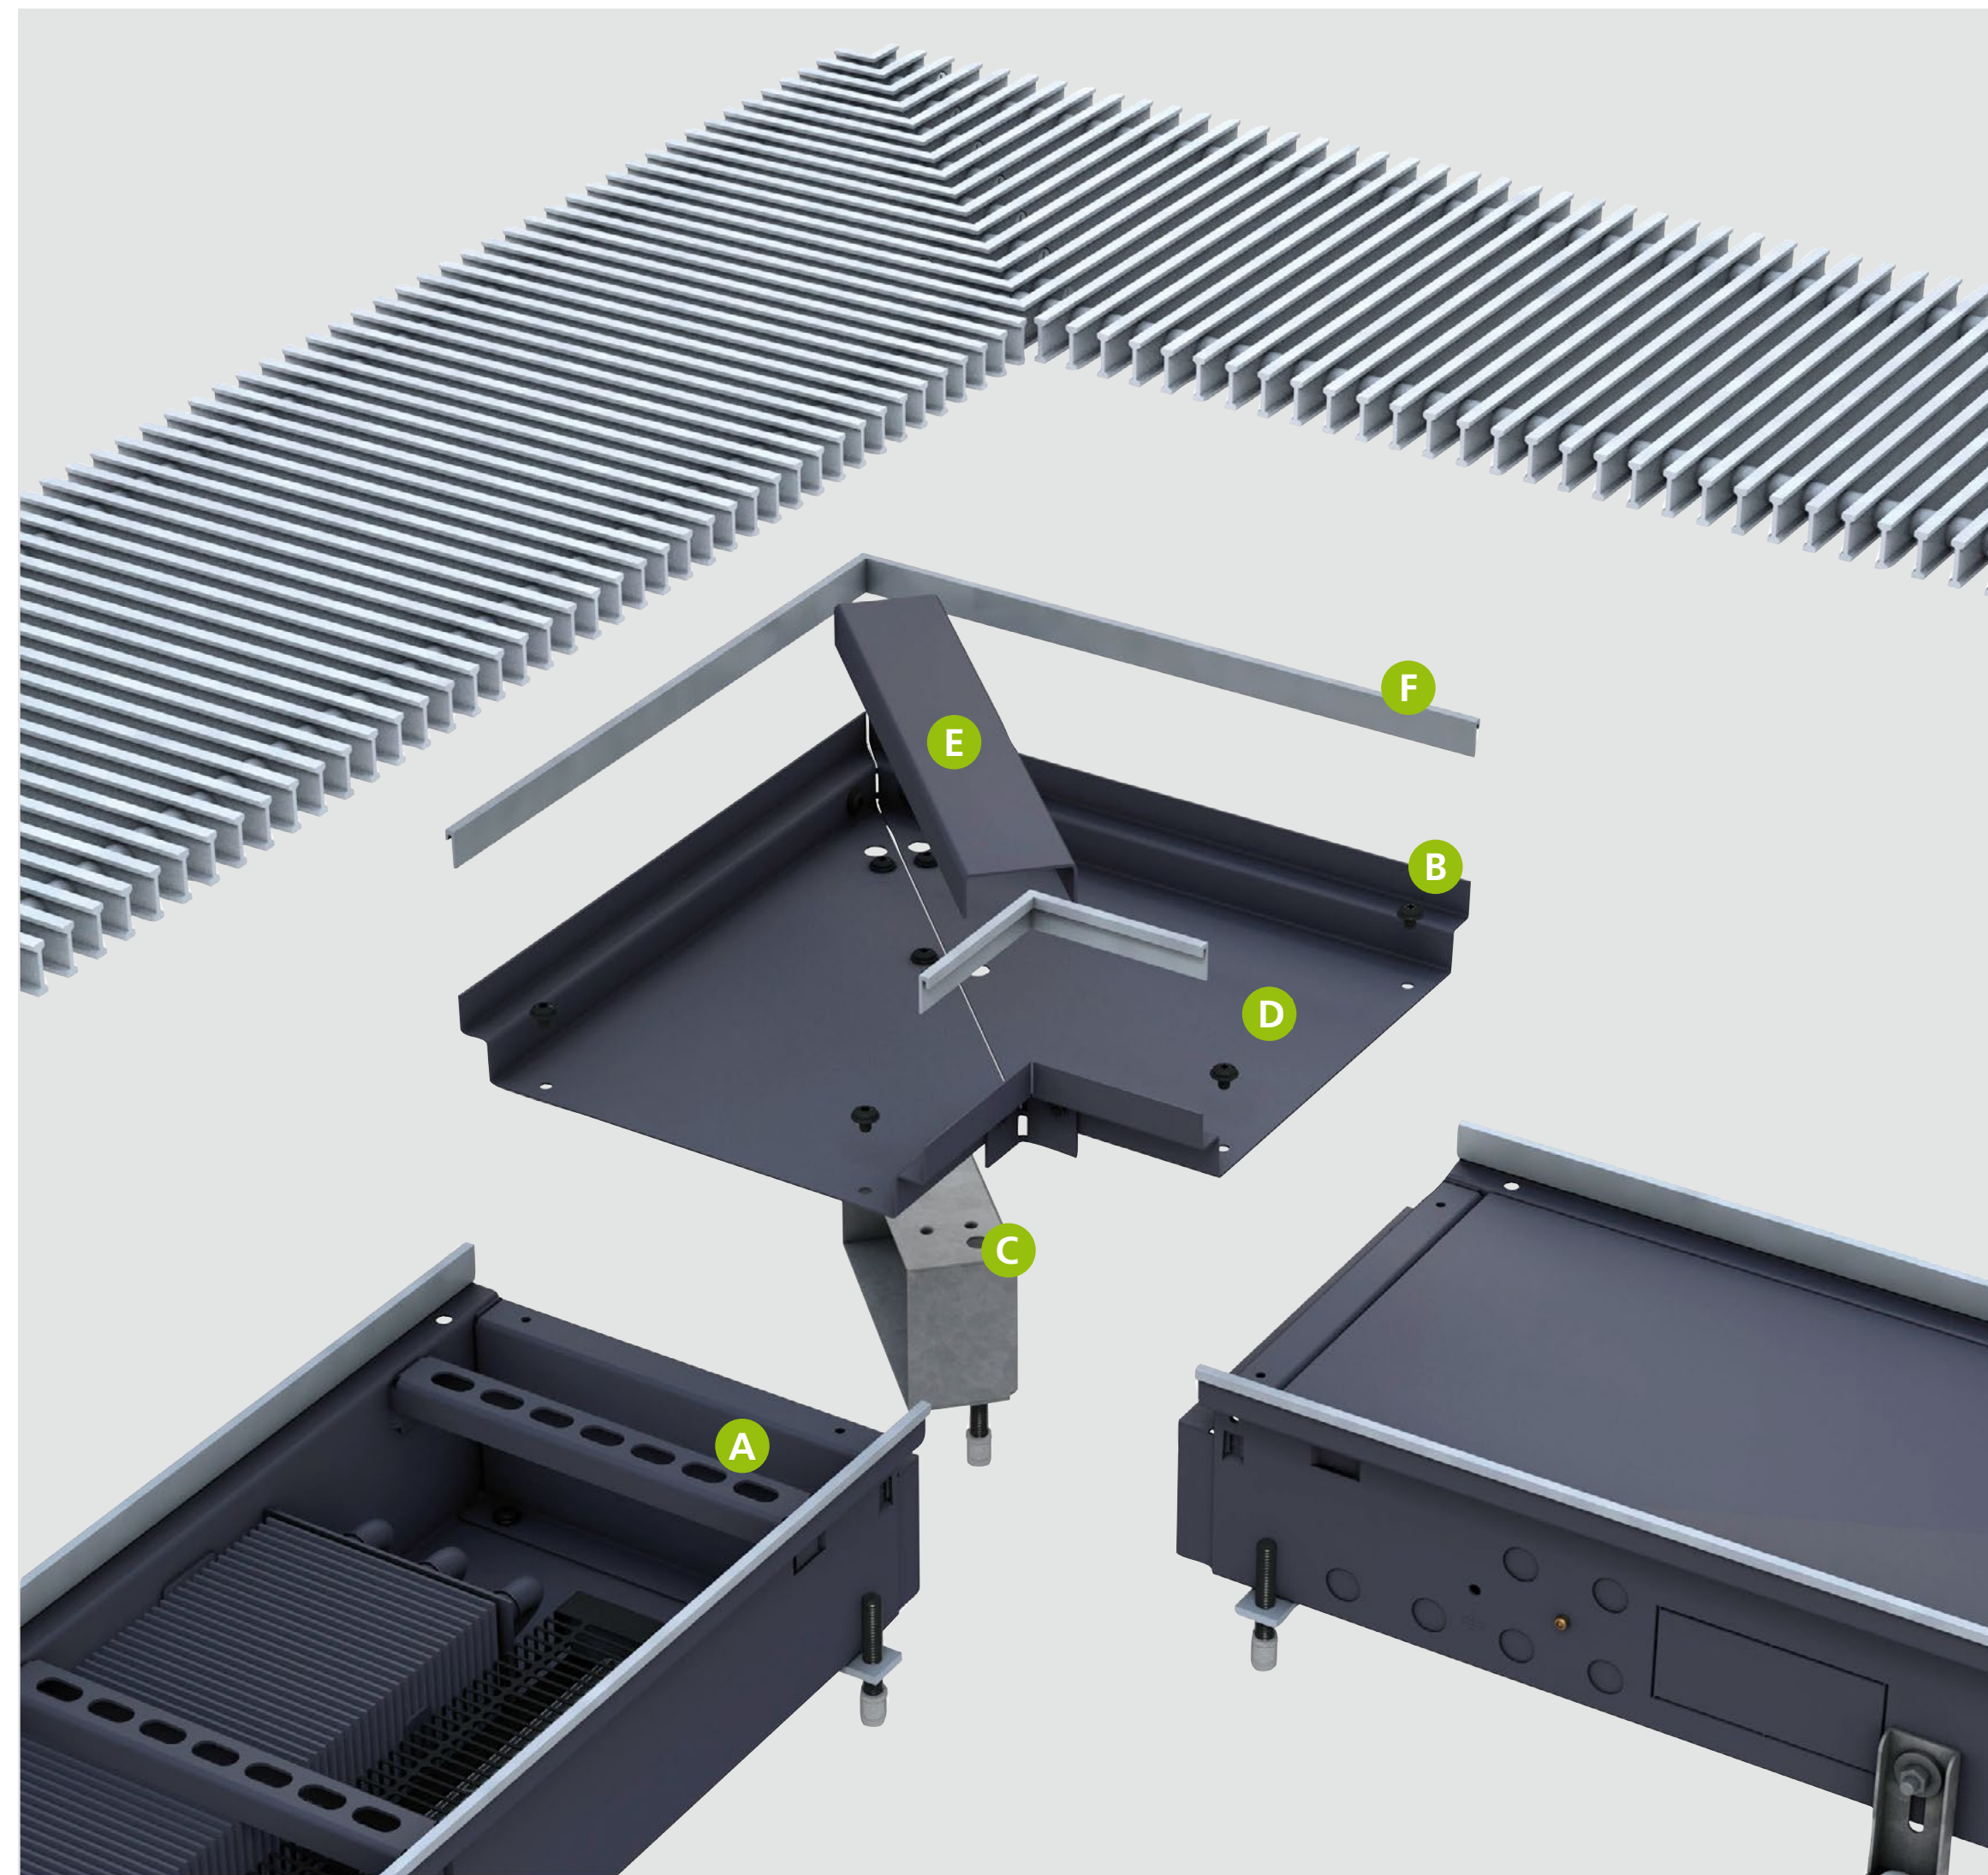

- ▶ connecting module with recess
- ▶ attachment element with frame profile is delivered made-to-measure following site measurement
- ▶ ideal for all kinds of façade profiles

Column module, round

- ▶ connecting module with recess
- ▶ attachment element with round frame profile is delivered made-to-measure following site measurement

Features

- A** modular brackets combine Katherm trench heating with the Katherm modules
- B** flat design, for the purpose of bridging cladding anchors
- C** robust height adjustment for ease of adaptation
- D** Katherm modules can be cut to size on site
- E** grille support
- F** frame profile delivered separately

Benefits for you!

Kampmann offers you the following service benefits:

- ▶ On-site advice
- ▶ Design support for all projects
- ▶ Detailed discussions
- ▶ Professional site measurements
- ▶ After-sales service
